Receive Cattle: 6/7/2021

Start Feed Efficiency Test: 7/13/2021

End Feed Efficiency Test: 9/21/2021

End Test: 10/15/2021

Southern Beef Performance Center

The Southern Beef Performance Center is located in Williston, FL. Our mission is to promote the seedstock cattle industry by feeding and testing cattle to isolate top performing, efficient genetics. By testing genetic lines for efficiency, seedstock producers can provide data to back their bulls. In an industry measured in pounds of product, there's little room for uncertainty with genetics. Take the guess work out of how your calf crop will perform and help your bottom dollar.

Here at the SBPC we have the capability to test 280 head per year, having four regularly scheduled tests a year. Our pens are 150' x 100'. Each pen can hold up to 35 head, giving each head 425ft² of space & plenty of shade. Our test will be a 70 day gain test with a 21 day diet adaptation period and a cool down period. SBPC has a roughage-based ration that is developed by our nutritionist. *You can't manage what you don't measure.* Be sure your herds genetics are on the cutting edge of the seedstock industry.

Costs:

- I. The total all-inclusive fee for the full 133 days is \$800 per bull.
 - Includes: feed costs, entry vaccinations, tagging, yardage, weighing, carcass ultrasound, yearling measurements, Smart Feed efficiency data & progress reports.
- II. A non-refundable entry fee of \$100 per head is due by May 1, 2021 with entry forms.
 - No charges will be due when receiving cattle.
 - There will be four (4) installments of \$175 per bull that will be billed at the end of each month.
- III. Veterinary expenses will be charged as occurring.

Health Requirements Prior to Unloading:

- I. Veterinarian or vet supplier approved & documented vaccinations for:
 - Pasteurella within 30 days of delivery date
 - Blackleg – 2 rounds prior to weaning
Preferably Vision 8 with spur
 - Vibrio/Lepto/Respiratory – 2 rounds
Preferably Bovi-shield Gold 5
- II. Must be weaned 45 days prior to unloading.
- III. Two rounds of vaccinations with at least one of those rounds using a modified live vaccine.
- IV. Horns must be smaller than 5" or dehorned prior to arrival

Feed Ration

The roughage-based ration is designed to optimize feed intake. The target weight gain throughout the test is 3-3.5lbs/day/head. The ration will be fed ad-libitum according to our nutritionist.
